China Is Building A Giant Solar Plant At Chernobyl

A pair of Chinese companies are building a solar power plant right next to the site of the infamous Chernobyl nuclear reactor.

State-controlled companies China National Complete Engineering Corp (CNCE) and GCL System Integration Technology

plan to build the solar plant in the 1,000-square mile exclusion zone of forest and marshland that surrounds the Chernobyl reactor.

It's part of a Chinese government plan to use heavily polluted areas for solar and wind power projects. CNCE and GCL plan to start building the Chernobyl solar plant next year.

"There will be remarkable social benefits and economic ones as we try to renovate the once damaged area with green and renewable energy," Shu Hua, the chairman of the GCL System Integration Technology, said in a press release .

The plant will generate roughly 1,000 megawatts of energy at peak capacity, enough to power

about 164,000 homes. However, the plant will almost certainly generate only about 20 percent of that energy. The companies involved wouldn't say precisely where in the exclusion zone the plant will be constructed.

China has been attempting to re-use many polluted zones for wind and solar since it pledged in 2014 to stop its carbon dioxide (CO₂) emissions from rising by 2030. As a result, the country plans to triple wind power capacity and greatly expand solar power by 2030. This amount of new energy pales in comparison to the amount of electricity the country plans to get from coal.

Of the 2,400 coal-fired power plants under construction or being planned around the world, 1,171 will be built in China. As a result, the consumption of coal in China has already grown by a factor of three from 2000 to 2013. The country consumes approximately half of all coal used worldwide and gets roughly 66 percent of its electricity from coal, according to the Energy Information Administration.

Recent studies indicate that the radiation risks of nuclear power were massively overestimated. Predictions of thousands of cancer deaths from nuclear incidents like Chernobyl or Fukushima are consistently proven incorrect.

Father at safari park filming lions captures moment his baby vomits all over mom

A trip to the safari park was clearly too much to stomach for a baby boy who couldn't hold down his lunch - and projectile vomited all over his poor mother. Little Brody's father was excitedly filming the lions walking just feet away from the family's car in the hilarious video, which has since gone viral on Twitter. 'Wow, I wouldn't mess with them guys, Brod,' he enthusiastically tells his son as a male and female

lion saunter along. 'It's gonna kick off here, it is gonna - ' The father, who appears to be British, is then suddenly interrupted when his wife exclaims, 'Oh my god.' But it wasn't the lions she was worried about. Brody's father turns the camera to check on his wife, realizing exactly what is about to happen as Brody calmly stares back at him. 'Oh god,' he exclaims as Brody suddenly

lets out a stream of vomit all over his mother's arm. The hilarious clip was first posted on Twitter by Alice Thompson, who appears to be related to Brody. It has since gone viral throughout social media, racking up thousands of retweets on Twitter and likes on Facebook. Brody may not remember his internet fame, but the video will no doubt haunt him at family parties for years to come.
